Emu clamp

Fitting system for layflat hose

Enjoy the convenience of attaching your couplings on-site.

The **Emu clamp** is a secure fitting method for attaching a coupling to a layflat hose. This non-corrosive aluminium clamp is made up of three segments, that bolt together.

Crusader Hose manufactures Bauer and Flange E couplings with the corresponding Emu tail. This ensures the perfect profile for a reliable and safe fitting system.

The **Emu clamp** fitting system has been tested in our laboratory to 2500 kPa. This extreme pressure test is a safeguard, so you can be confident that the coupling won't blow off during pumping.

When considering using the **Emu fitting system**, make sure your coupling tails have been specially machined with Emu tails.
Emu clamps cannot be used with conventional rolled-tailed Bauer or Flanges.

Looking for stainless steel alternative? We manufacture the Waterlord® clamp of a similar design to the Emu clamp.
Contact us for available sizes.

IDEAL FOR

- Bauer couplings
- Flanges
- Emergency on-site repair

BENEFITS

✓ Easy to attach

✓ Securely fitted

✓ Non-corrosive aluminium

✓ Lightweight

The Emu clamp - a safe and secure fitting method
